

# Explorative Analysis

Discovering patterns by visualising distributions and relationships

Ayyaz Azeem

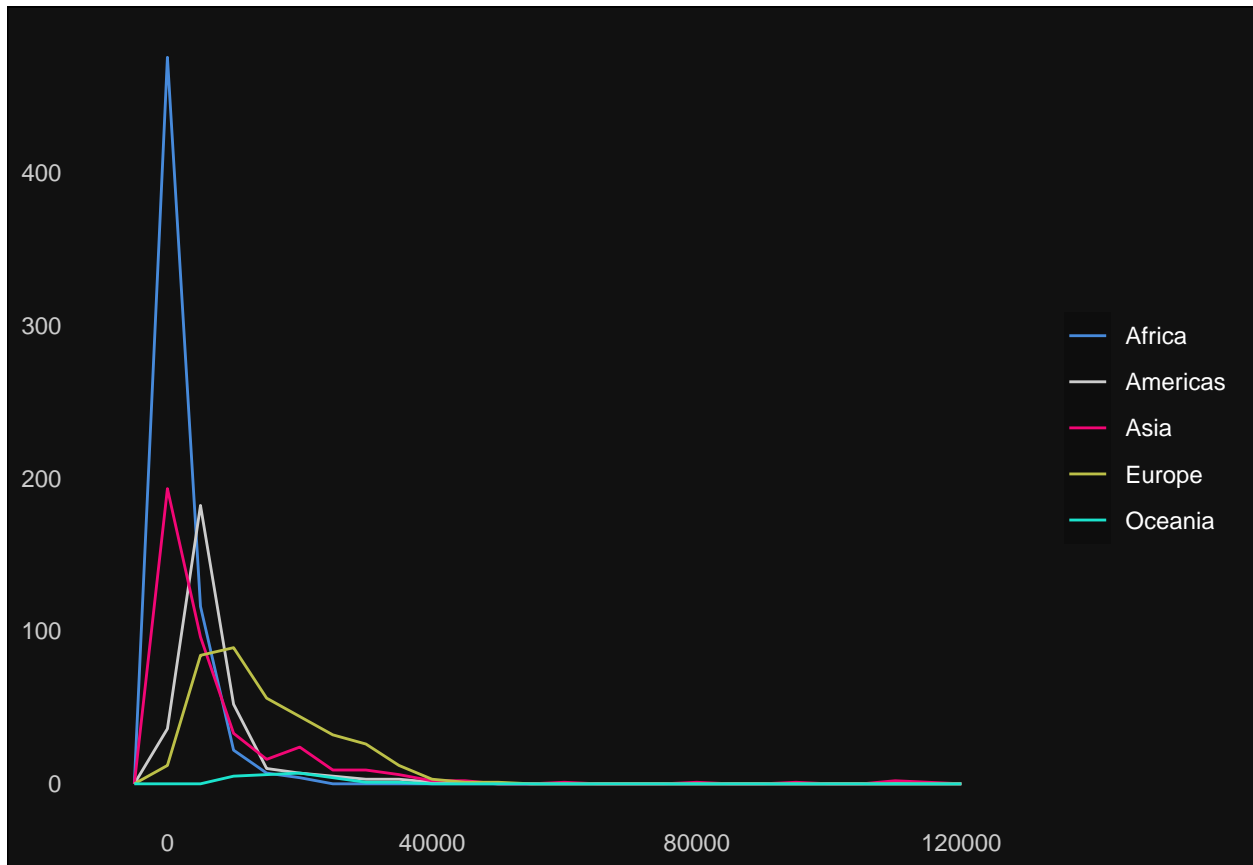

11/15/2020

## Task 01

Exercise 01 Now its time to create your own theme. You are free to chose one theme as for example the dark theme and make changes on top. Think about your colors, the style of the axis labels, lines and ticks and the legend.

## Exercise 02

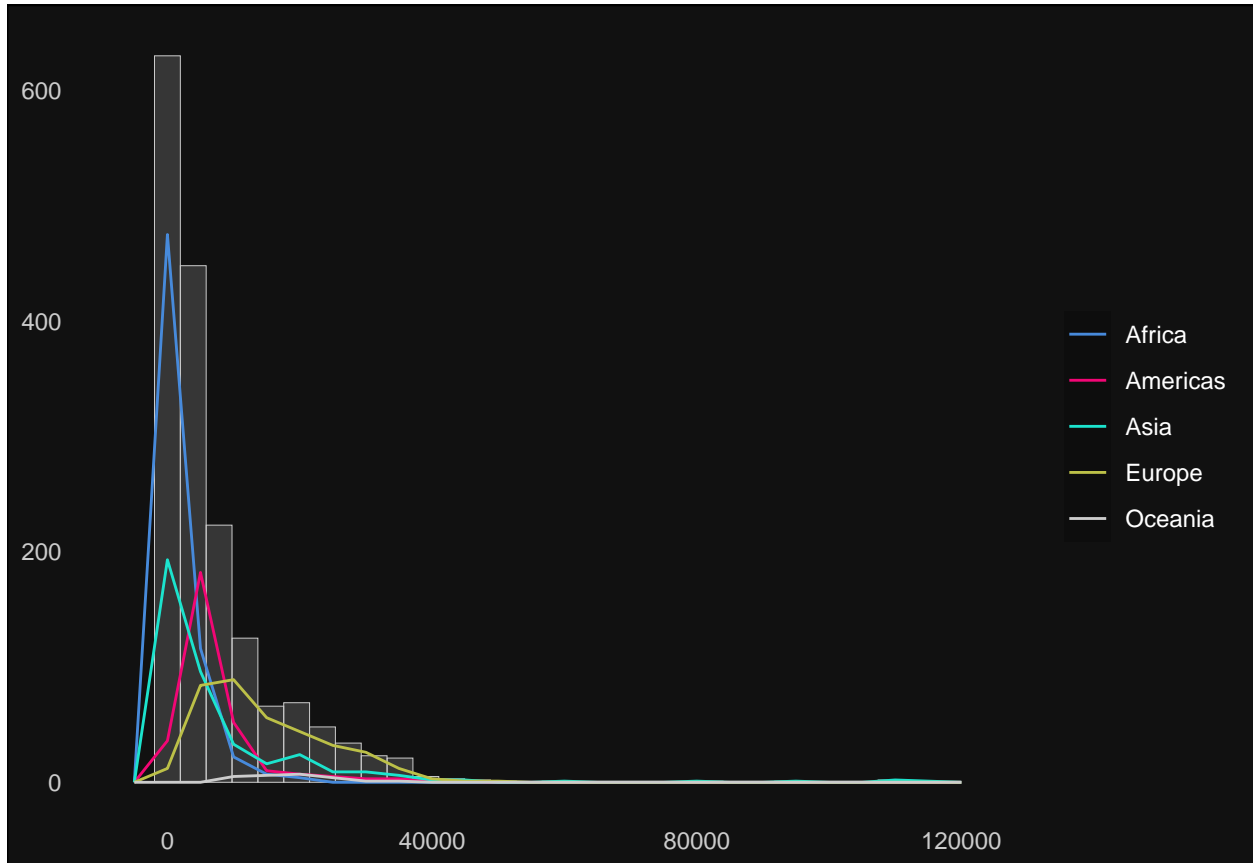

Choose a different variable like for example population or GDP per capita and check in the same way its frequency using a frequency plot.

### Exercise 03

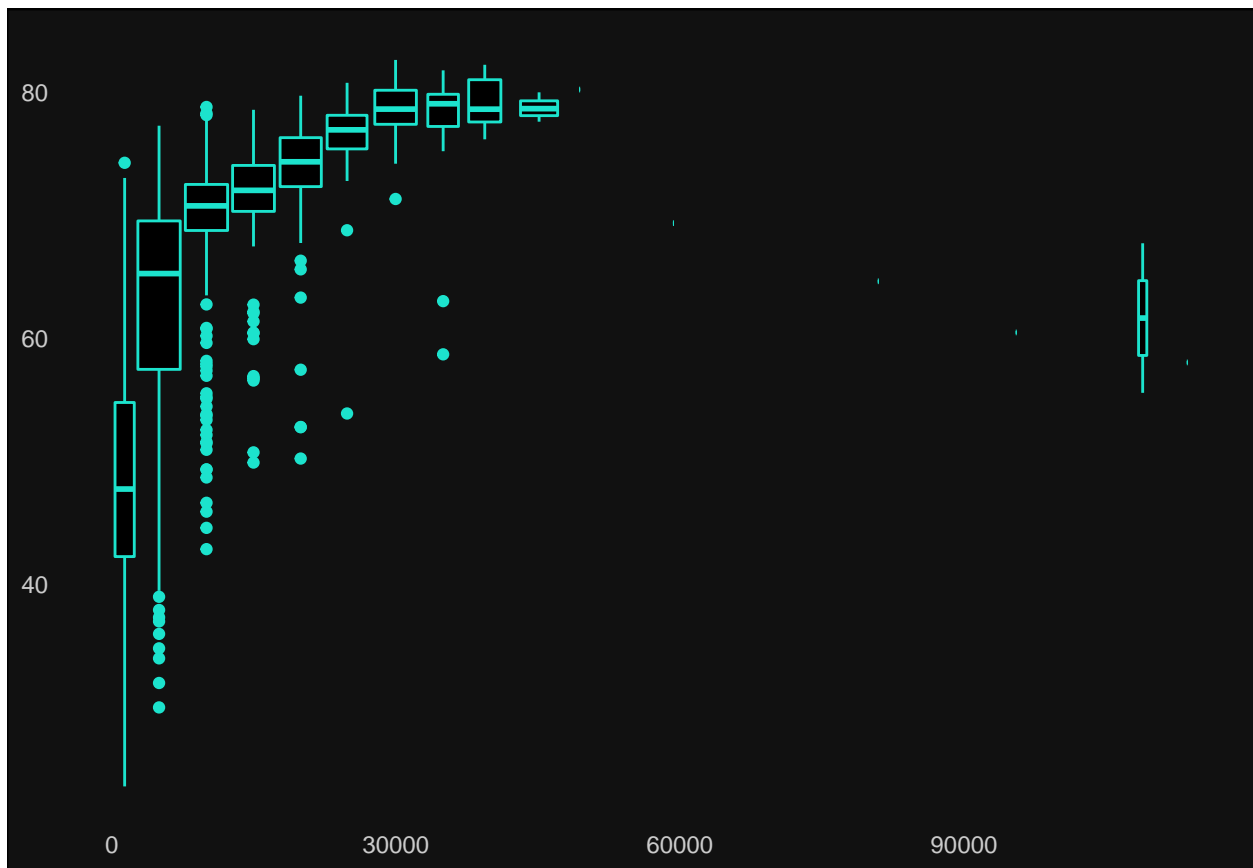

Choose a different variable like for example population or GDP per capita and check in the same way its frequency now using a histogram.

```
## 'stat_bin()' using 'bins = 30'. Pick better value with 'binwidth'.
```

### Exercise 04

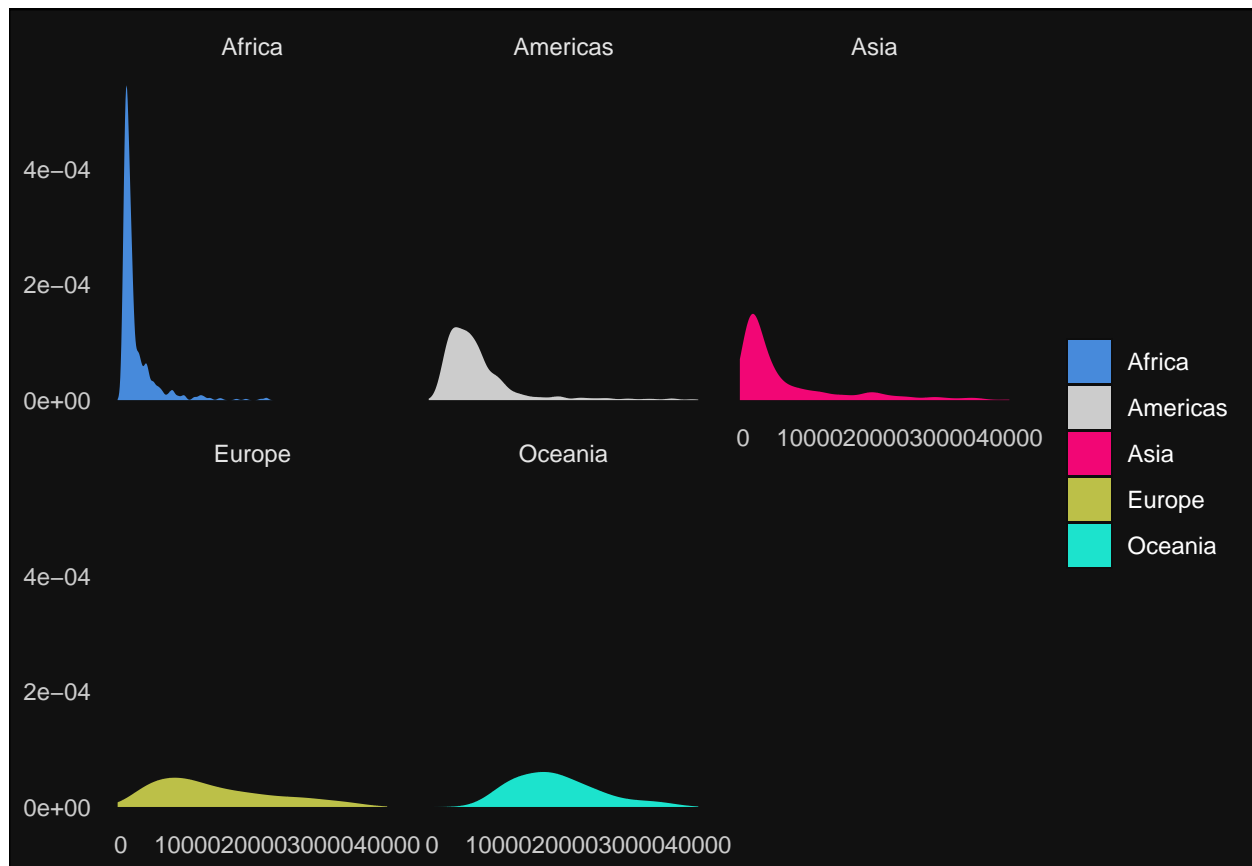

Choose a different variable like for example population or GDP per capita and check in the same way its frequency now using a boxplot.

### Exercise 05

Choose a different variable like for example population or GDP per capita and check in the same way its frequency now using a density plot.

```
## Warning: Removed 14 rows containing non-finite values (stat_density).
```

### Exercise 06

Chose two variables from the gapminder dataset and check their relationship by using a scatter plot.

### Exercise 07

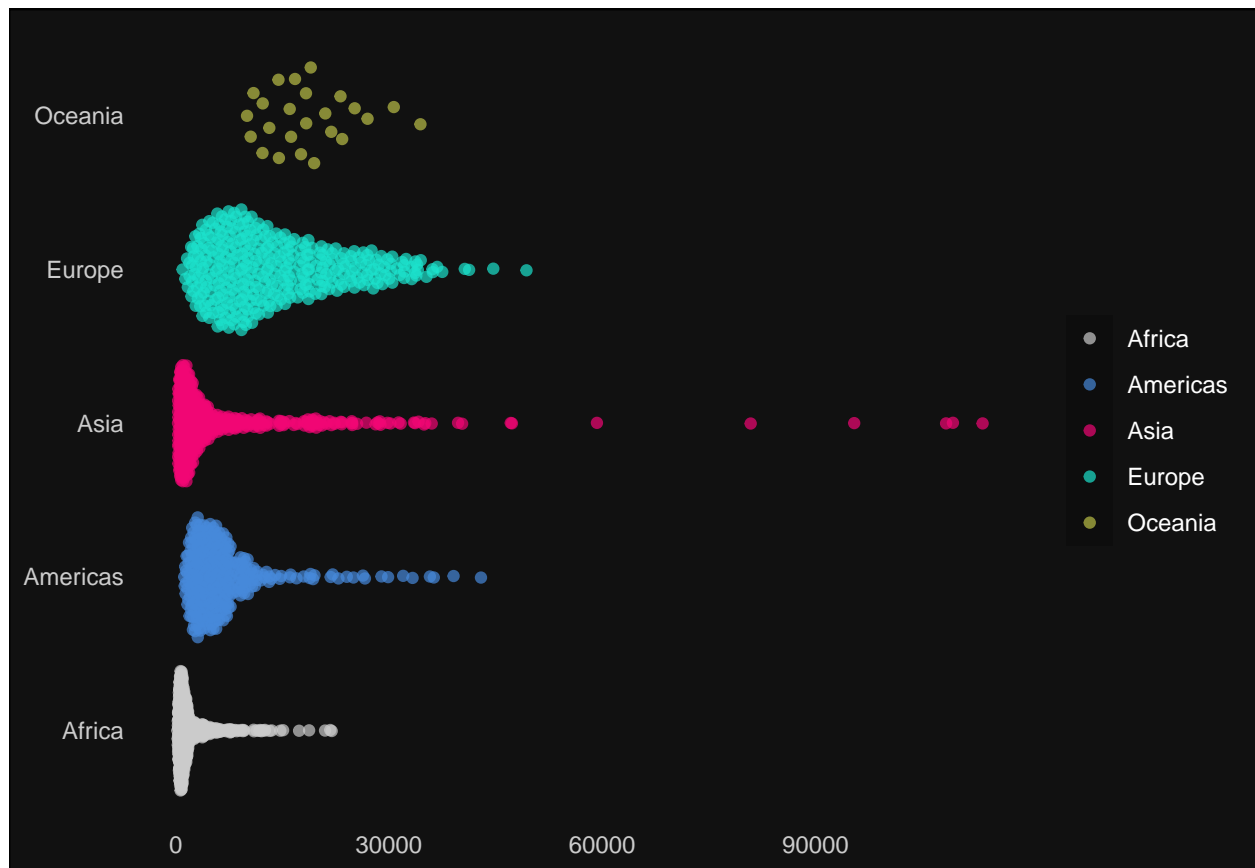

Chose two variables from the gapminder dataset and create in the same way the marginal scatter plots.

### Exercise 08

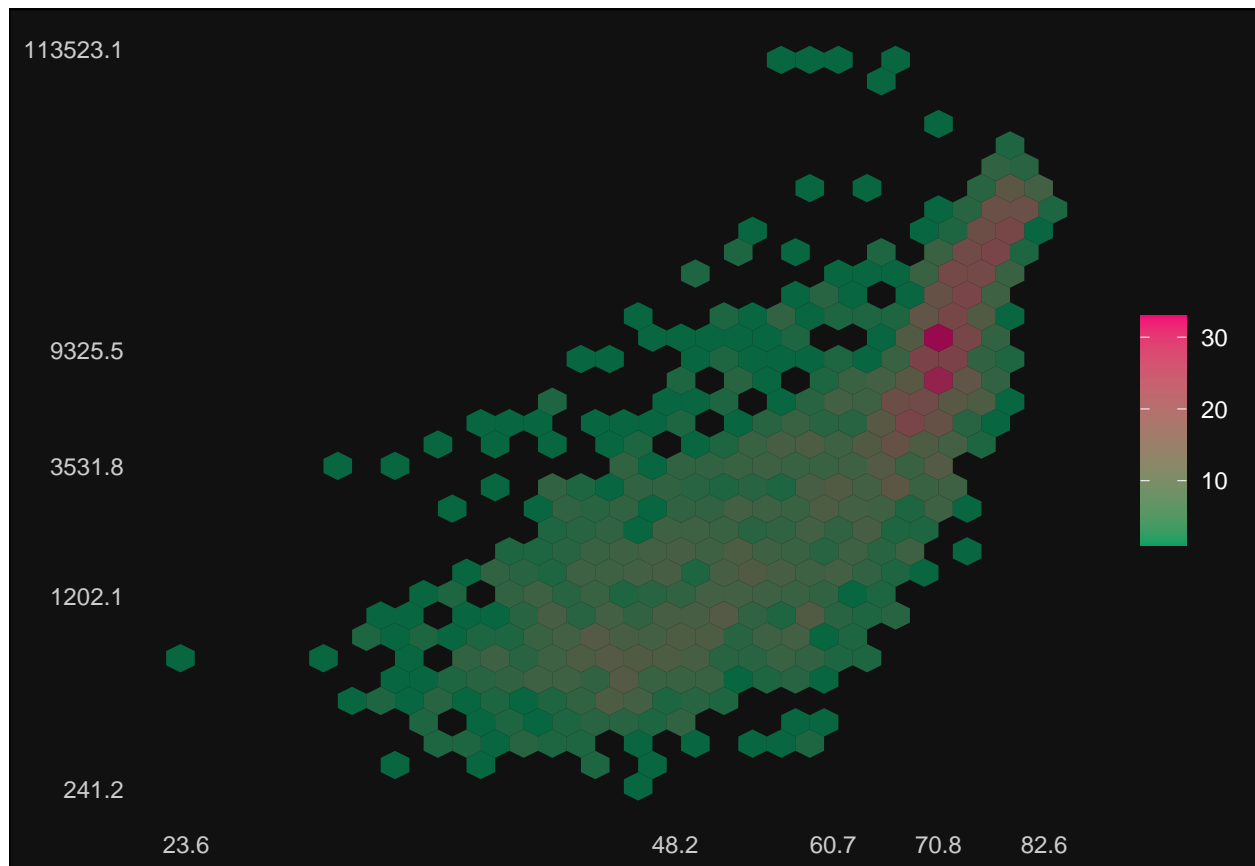

Chose the variables continent and any numeric variable from the gapminder dataset and create the beeswarm plots.

```
## Warning: package 'ggbeeswarm' was built under R version 4.0.3
```

### Exercise 09

Chose two variables from the gapminder dataset and check their relationship by using the hexagonal binning.

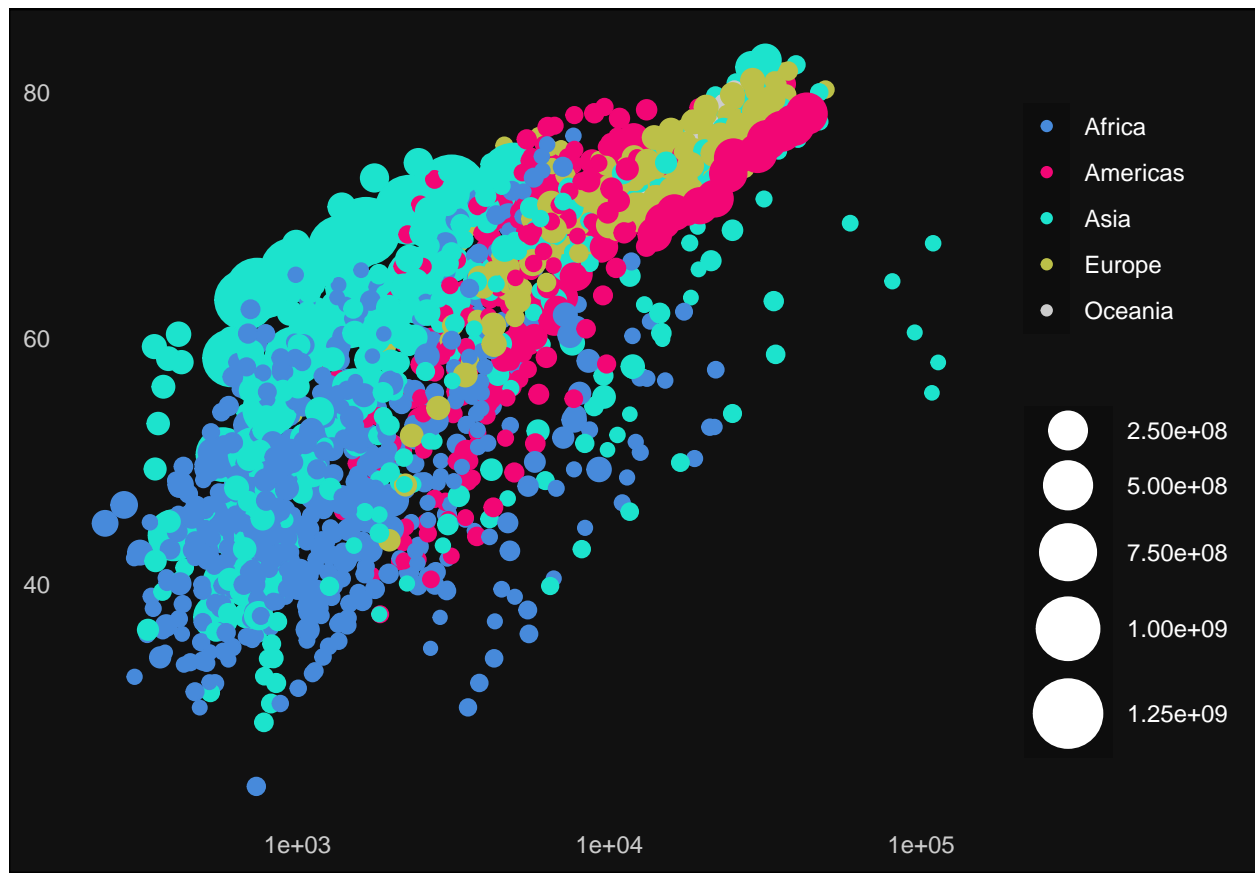

### Exercise 10

Use the examples and play around a bit with the options in order to get familiar with scales and axes.

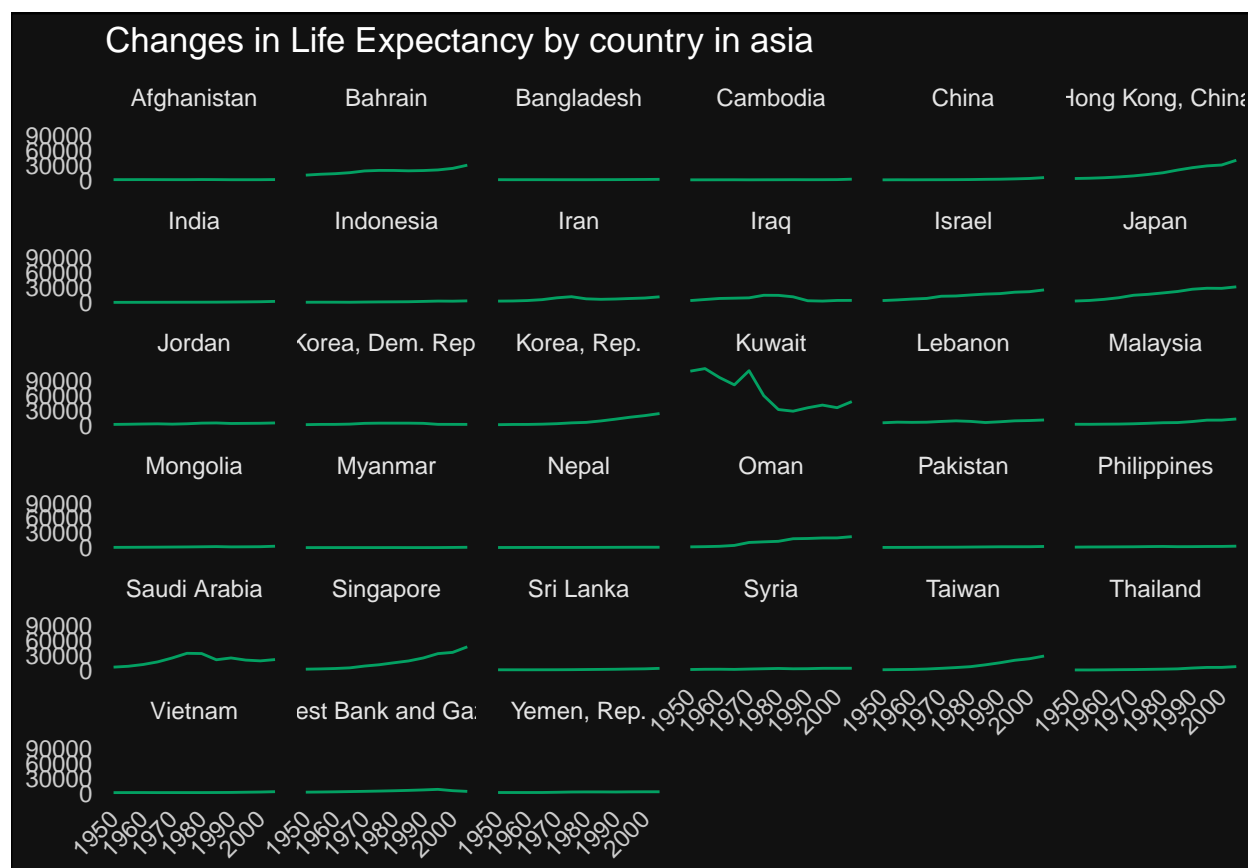

```
## Scale for 'colour' is already present. Adding another scale for 'colour',  
## which will replace the existing scale.
```

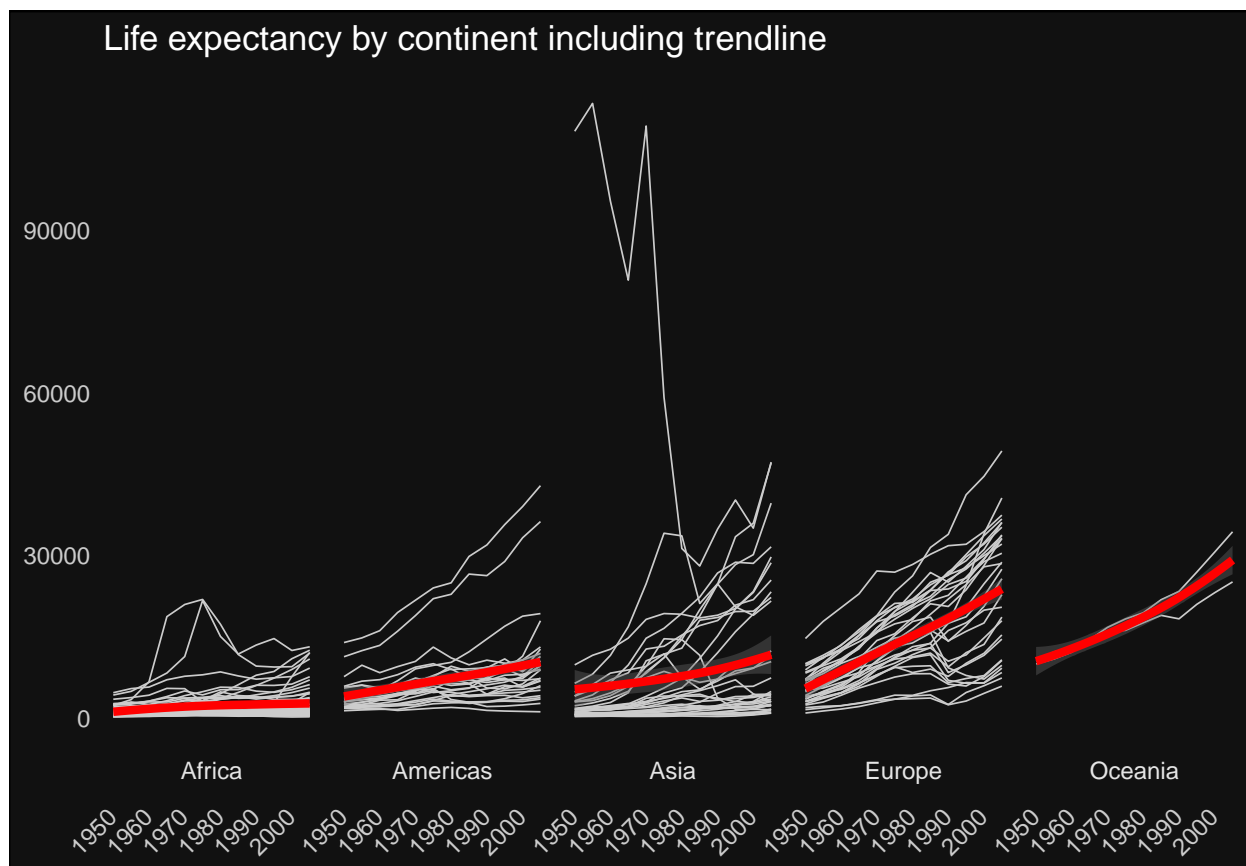

### Exercise 11

Now chose a different variable from the gapminder dataset and do the same analysis flow, feel free to check on another continent as well.

```
## 'geom_smooth()' using formula 'y ~ x'
```

```
## 'geom_smooth()' using formula 'y ~ x'

```

### Exercise 12

Create different versions of parallel coordinates charts using the gapminder dataset. Also try small multiple.

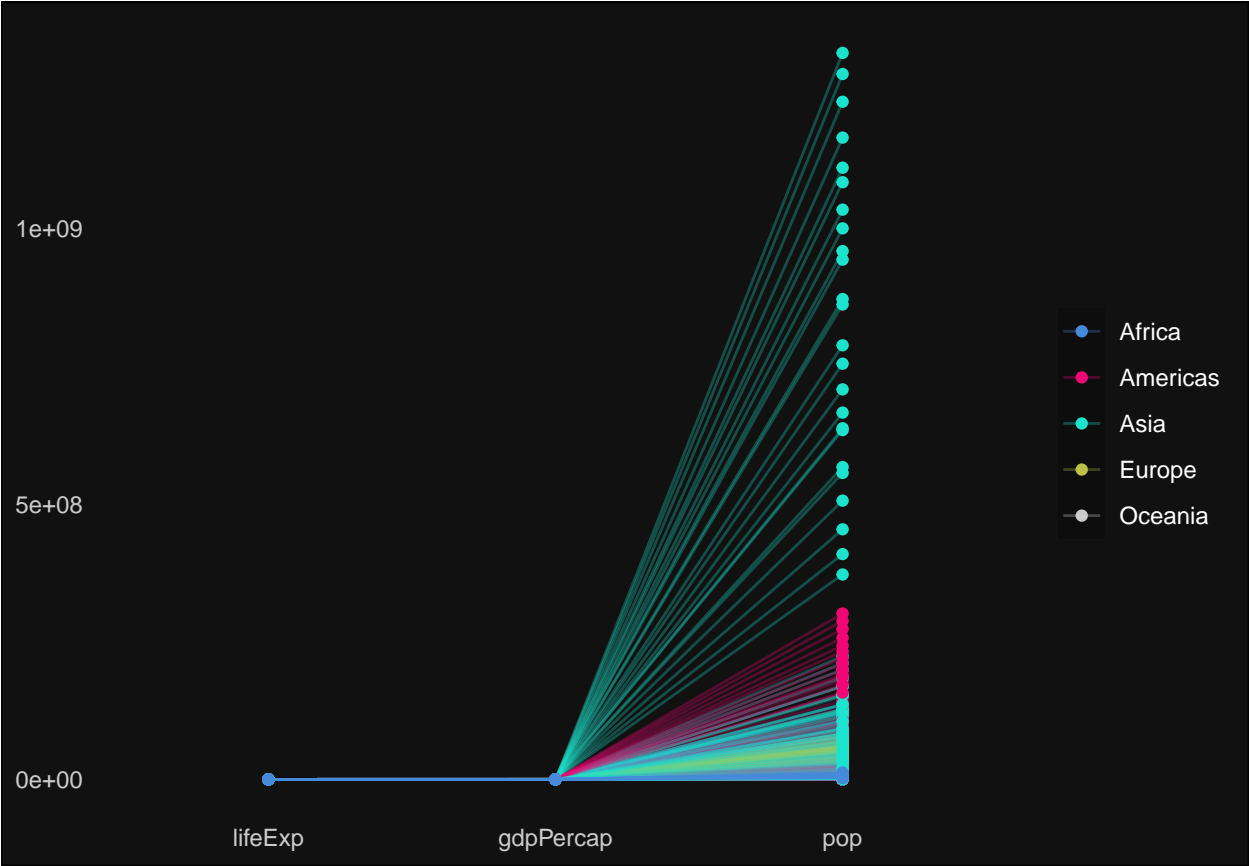

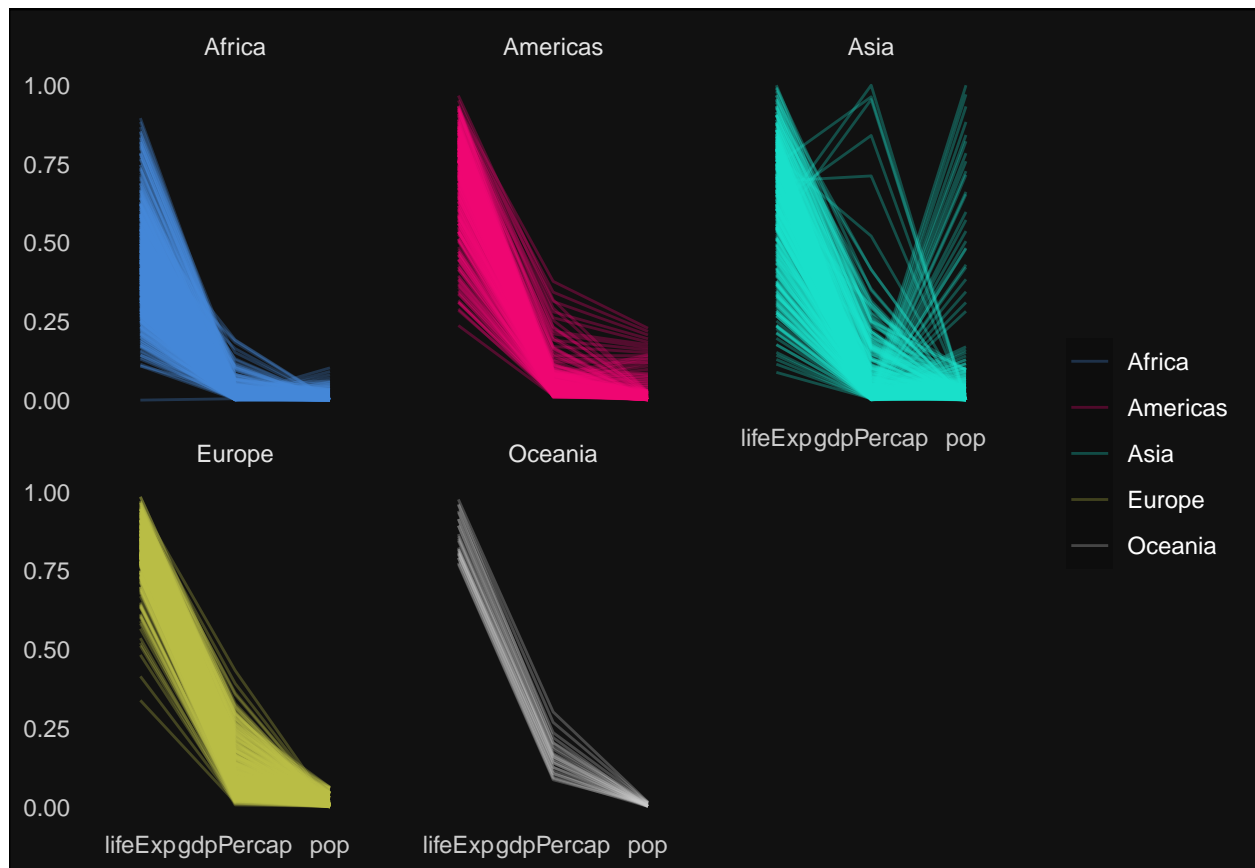

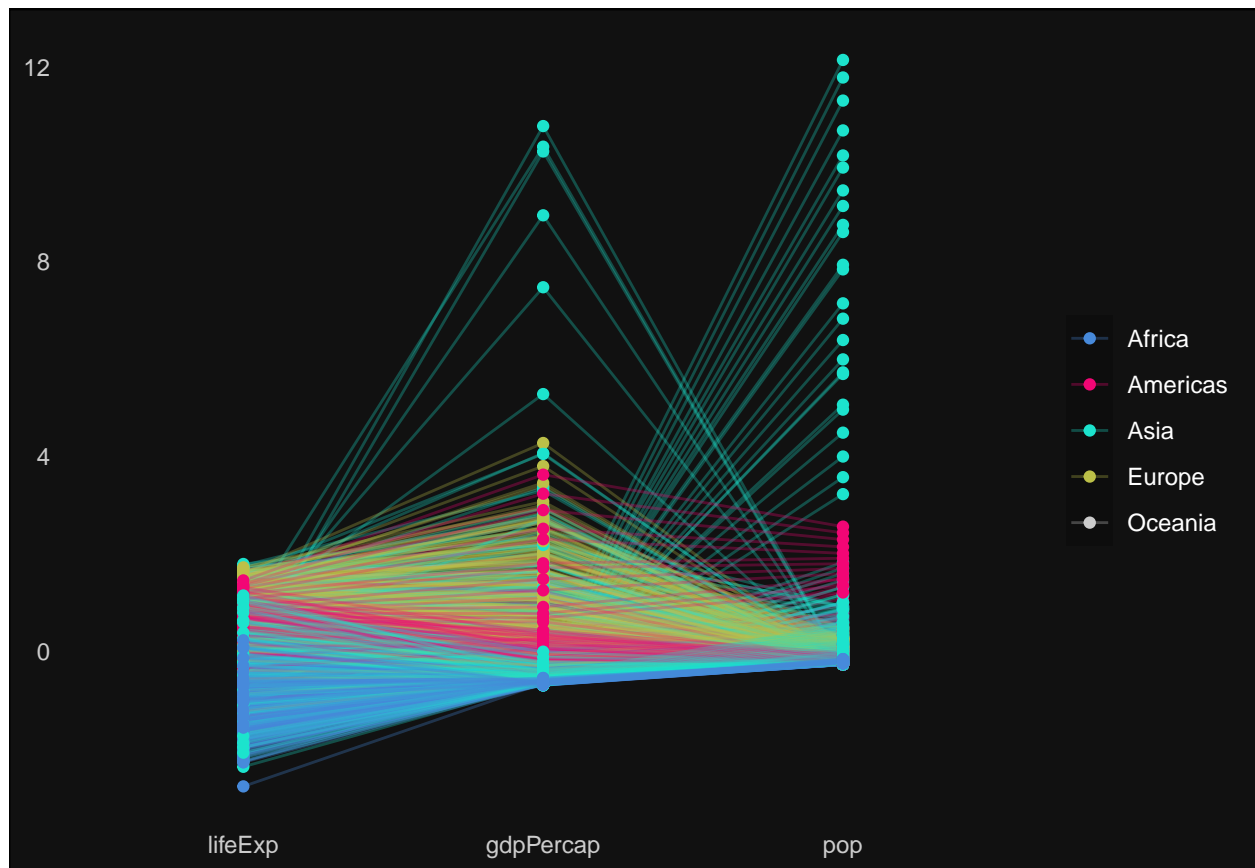

### Exercise 13

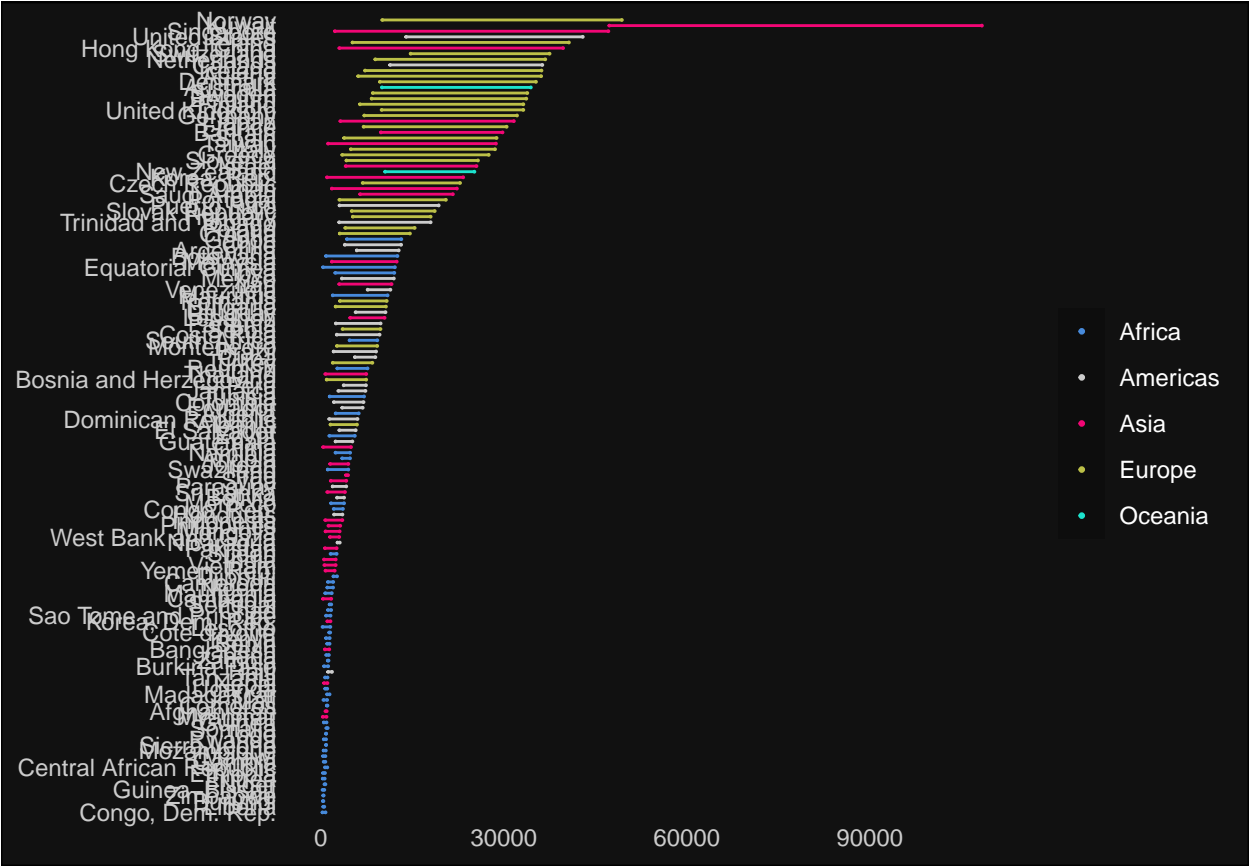

Now choose a different continent than Europe and also sort by 2007 instead of 1952.

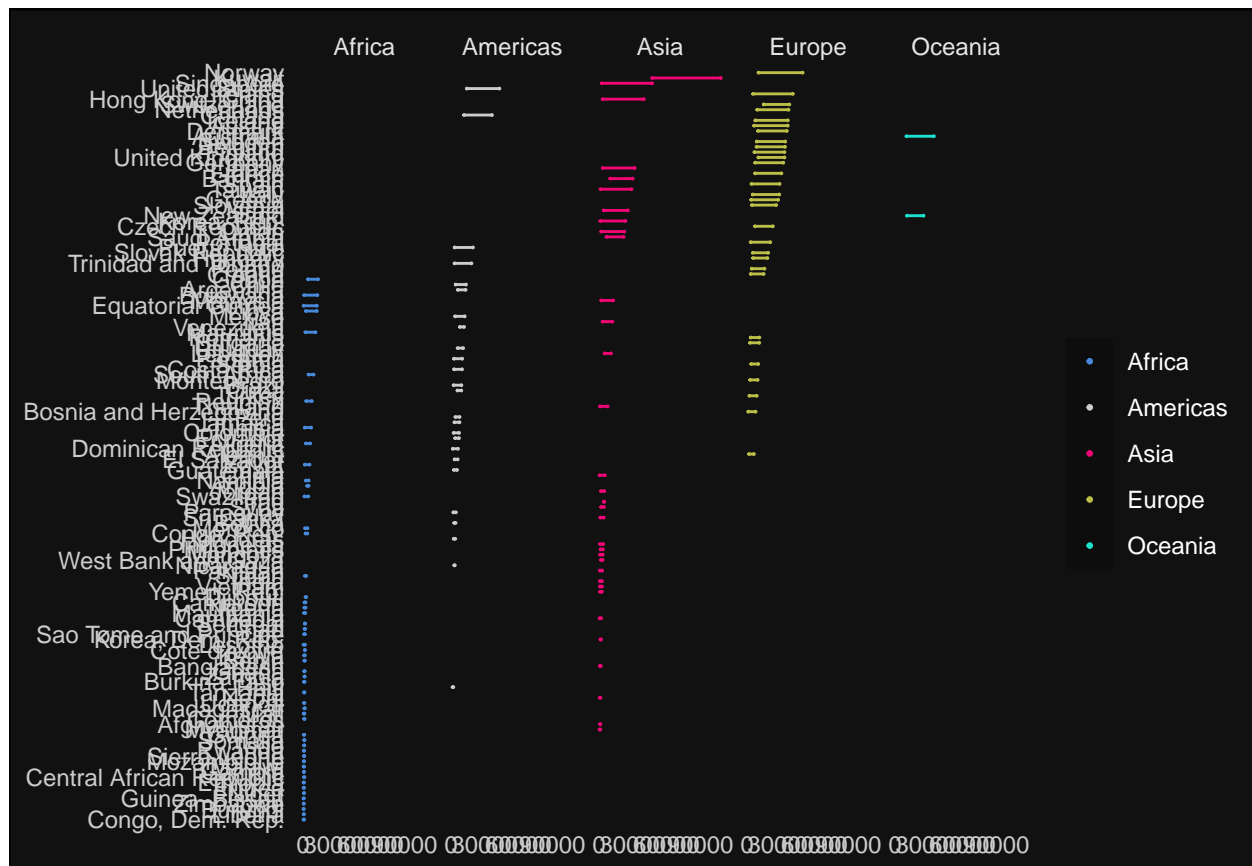

```
## [1] "country" "continent" "year" "gdpPercap"

## # A tibble: 10 x 4
##   country    continent  year gdpPercap
##   <fct>      <fct>    <int>    <dbl>
## 1 Afghanistan Asia      1952     779.
## 2 Afghanistan Asia      2007     975.
## 3 Albania    Europe    1952    1601.
## 4 Albania    Europe    2007    5937.
## 5 Algeria    Africa    1952    2449.
## 6 Algeria    Africa    2007    6223.
## 7 Angola     Africa    1952    3521.
## 8 Angola     Africa    2007    4797.
## 9 Argentina  Americas  1952    5911.
## 10 Argentina  Americas  2007   12779.

## tibble [284 x 4] (S3: tbl_df/tbl/data.frame)
##  $ country   : Factor w/ 142 levels "Afghanistan",...: 1 1 2 2 3 3 4 4 5 5 ...
##  $ continent : Factor w/ 5 levels "Africa","Americas",...: 3 3 4 4 1 1 1 1 2 2 ...
##  $ year      : int [1:284] 1952 2007 1952 2007 1952 2007 1952 2007 1952 2007 ...
##  $ gdpPercap: num [1:284] 779 975 1601 5937 2449 ...
```

This horizontal bar chart displays the total number of COVID-19 cases for various countries. The x-axis is labeled with numerical values: 0, 30000, 60000, and 90000. The y-axis lists countries, with the top few being Norway, United Kingdom, Germany, France, Italy, and the United States. The bars are colored in a gradient, with blue representing lower case counts and red representing higher case counts. The United Kingdom's bar extends beyond the 90,000 mark on the x-axis.

#### Exercise 14

Create your own small multiple waffle chart by using different data and a new style.

## WOMAN Arcada 2018

## WOMAN Arcada 2019

## WOMAN Arcada 2020

men woman

### Exercise 15

Put all the code of the results of the exercise into a markdown file and save it as a pdf.

### Task2
